

Renewables

Renewables form an important part of a sustainable future, and, we have worked with the renewable sector, helping to deliver renewable infrastructure using wind, solar and hydro technologies.

We can provide expert advice about how to get a solar or wind project off the ground, and our expertise will see your project through to full operation.

Our areas of renewable energy planning expertise include:

- ✓ **Preliminary environmental** investigations;
- ✓ **Preliminary planning &** application advice;
- ✓ **Community** engagement;
- ✓ **Planning** applications;
- ✓ **Environmental & Social Impact Assessments (ESIA);**
- ✓ **Environmental management** in construction & operation phases;
- ✓ **Approval** modifications;
- ✓ **Compliance** audits;
- ✓ **Environmental site** management.

Advice and expertise

With our expert planners and environmental specialists to help navigate your project through the complex planning schemes, our experienced environmental managers can also help smooth the path during construction and operation.

Community engagement

Proactive community engagement is key to the sector's social licence. We can manage all aspects of community consultation and engagement and work with you to achieve positive outcomes for your project and local communities.
